COVID Operational Readiness

How crisis will affect EH&S

Adapting to the “New Norm”

As we take the global journey to recover from this challenging and unexpected crisis, organizations will be intensely zeroed in on the operational challenges COVID presents. This includes ongoing health surveillance and practice, control reportability, and business continuity management. Considering the general practices built within a well-rounded EHS program and now supporting Operational Readiness as a result of COVID, the LyfeCycle solution is helping companies navigate the health, safety and operational issues that go hand and hand with employees returning to the job.

LyfeCycle assists organizations in maintaining operational continuity as we collectively discover the new road that lies before us. Public health professionals currently estimate that this could take between one to three years. During this period, companies will need to continuously monitor for infection while maintaining a robust set of controls and procedures for assessing and mitigating COVID risks.

Best Practices Tracking - COVID testing tracking, PPE assignment/fit testing, Quarantine and monitoring, Quarantine and return to work accommodations, Employee self-assessments.

Job Hazard Analysis- PPE and work practices hazards and controls assessment, Hazard reporting and PPE gap analysis

Compliance Management- Company and gov. COVID policy compliance, tracking and tasking.

Health & Safety Audit- Work area and practice inspections, Hygiene/cleaning inspections, Post-infection inspections, Remote or offsite work practice inspections, Internal audit compliance.

Event Management– Infection event reporting/investigation, Potentially exposed employee identification and management, Policy violation events and investigations, Shutdown or isolation events and management

Metrics- Site risk and exposure assessments, PPE availability assessments, Testing/infection/monitoring metrics, Supplier & critical supply assessments

“By design functions created for EHS compliance in the modern world, yet flexible enough to adapt to the COVID crisis at hand. We are guiding organizations toward better EH&S practice, as well as supporting what operational readiness will mean to each organization, uniquely.” -Steve Taylor, LyfeCycle

BUILT WITH EH&S LEADERS

Several significant EH&S leaders worked with LUX interactive a few years back to develop a custom EH&S solution that delivers functionality EH&S programs truly need to evolve. Upon completion, the feedback was overwhelming. We quickly knew we had something special that other organizations could benefit from!

BUILT WITH A BACKBONE

LUX interactive is a first-in class Software Company that has been servicing clients in a strategic and custom way for the last two decades. From large clientele such as Spirit Airlines and Red Roof Inn to local Associations like the Michigan CPA's and Michigan Realtors; LyfeCycle is founded on a strong and credible reputation in creating superior solutions industry-wide.

BUILT WITH INTENT

Well rounded EH&S technology should be both impactful and affordable to organizations of all sizes (Global or Local). LyfeCycle is changing how these organizations can quickly and effectively make positive changes and improvements to their programs as soon as a few days post implementation.
